

Automating Your Receiving Process

The Automated Receiving System (ARS) is a product developed by Odin Technologies. It allows Ecometry users to automate the often tedious and labor-intensive process of receiving purchase orders and products from vendors. ARS accomplishes this by taking advantage of the UPC codes manufactures all ready put on products.

With ARS you:

- **SAVE MONEY** - Gain significant speed in the receiving process, often reducing receiving time from days to just a few hours..
- **INCREASE SALES** - Quicker inventory visibility means increased sales performance.
- **CUSTOMIZE ITEM LABELS** - With Smart Labels now you have total control over what size item labels you want on your products, and what information you want visible. Bold fonts, different size fonts, and bar code the information if you need to. It is completely customizable and easy.
- **REDUCE ERRORS** - Greatly reduce receiving mistakes due to human error.
- **GAIN EFFICIENCIES** - Minimize time by utilizing 'License Plate' technology.
- **MORE ACCURATE AP** - Reduce costly audits and errors during the invoice approval process by utilizing bar code technology and standard Ecometry features.
- **VISIBILITY TO VENDOR ISSUES** - ARS users can now audit not just the receiving process but merchandisers and vendors. A complete audit is now possible giving you visibility and insight to how your inventory is being managed. - Identify Vendor Compliance issues easily!
- **VENDOR CHARGE BACKS** - You can now document the information to 'charge back' vendors or eliminate those vendors too expensive to do business with.

ARS will produce a 'License Plate' for tracking. Once the put away process is complete one scan will automatically move your inventory into usable primaries.

Smart Labels gives you the ability to customize your item labels. Print vendor#, PO#, even the transaction number the item was received on! And much more. Change fonts and size. You now have visibility and control to print all your important warehouse information.
